AnyCubic Kobra 3 Combo 3D Printer

The AnyCubic Kobra 3 Combo is an advanced 3D printer that offers a host of features and amenities ideal for beginners and advanced users alike. With fast printing, advanced color control and intelligent management features, the Kobra 3 Combo sets new standards in the world of 3D printing.

Advanced technical features

The AnyCubic Kobra 3 Combo stands out for its impressive print speed of up to 600 mm/sec for fast turnaround of projects. Equipped with dual 200W PTC heating, it provides efficient air circulation to maintain a constant temperature and guarantee high quality prints. With a maximum nozzle temperature of 300°C and a heating table of 110°C, the device is compatible with a variety of printing materials such as PLA, PETG and TPU.

Innovative multicolor printing system

The printer supports multicolor printing with the ability to use up to 4 colors simultaneously, and up to 8 colors optionally. The Color Engine Pro system provides precise and efficient color management to create unique multicolor designs. RFID synchronization takes care of exact color matching of the filament, which increases printing efficiency.

Smart management and monitoring

With its built-in G-Sensor, the Kobra 3 Combo detects and compensates for vibrations, resulting in exceptionally smooth and high-quality prints. The AnyCubic algorithm precisely controls nozzle pressure to ensure smooth extrusion of the filament on every layer. In addition, the nozzle clog detection function automatically stops printing and warns the user, protecting the device from damage.

Ease of use and maintenance

The printer is designed with ease of use in mind. Simplified setup and easy cable connections make installation quick and hassle-free. A 4.3-inch touch screen with an adjustable tilt from 30° to 60° allows convenient control of the printer in any position. The system's module is protected from contamination for easy cleaning and maintenance.

Remote management and modern app

With the AnyCubic app and AnyCubic Slicer, users can manage the printing process from anywhere. The app allows real-time print monitoring and remote control of the printer, giving full control of the project without having to be near the device. LAN mode eliminates network latency, offering a fast and secure connection.

Manufacturer	AnyCubic
Model	K3CBBKOA-O
Weight of the device	9.2 kg
Maximum temperature of the heating table	110°C
Maximum nozzle temperature	300°C
Dimensions of the machine	452.9 (L) x 504.7 (W) x 483 mm (H)
Touch screen	4.3 inches
Net weight	4.6 kg
Multicolor printing	4 colors, expandable to 8 colors
Printing material	PLA, PETG, TPU
Printing speed	600 mm/s max.
Print dimensions	250 x 250 x 260 mm
Power supply	400W
Dimensions of the filament container	365.94(L) x 282.8(W) x 234.5 mm(H)

Productinformatie

Artikelnummer	KOBRA3COMB
Merk	ANYCUBIC
Is on Sale	Nee
