Beschrijving

The LM4558 devices is a monolithic integrated circuit designed for dual operational amplifier. The high common-mode input voltage range and the absence of latch-up make these amplifiers ideal for voltage-follower applications. The devices are short-circuit protected and the internal frequency compensation ensures stability without external components. The LM4558 is characterized for operation from 0°C TO 70°C.

FEATURES

- œ No frequency Compensation Required
- œ No latch-up
- œ Large common mode and differential voltage range
- œ Parameter tracking over temperature range
- œ Gain and phase match between amplifiers
- œ Internally frequency compensated
- œ Low noise input transistors

Productinformatie

Artikelnummer	LM4558
Merk	Merk
Is on Sale	Nee
