The Standard - proven technology for all-round use

The electronically temperature-controlled Ersa ANALOG 60 soldering station is the standard model in Ersa's series of soldering stations. The high heat-up rating of 190 W ensures an immediate supply of heat. The precise Ersa RESISTRONIC control system exploits the positive effect of the PTC (Positive Temperature Coefficient) heating element and herewith internally heated ERSADUR long-life soldering tips with anti-rotation lock. A potential equalization jack with a high-resistance connection to the soldering tip ensures the safety of sensitive components. The multifunctional holder with its swiveling sponge container also functions as a hot tip holder.

Consisting of electronic station OANA603, soldering iron Basic tool 60 with long-life soldering tip O832CD and tool holder OA28.

Power rating (Watt) 60

Supply (Volt) 230

Secondary voltage (Volt) 24

Temperature range (in °C) 150 - 450

Preheating time (in seconds) 60

Design Soldering Tips long-life tip

Antistatic design (yes / no) no

Digital display (yes / no) no

Weight (g) 2,800

Replacement heating element (order-no.): 067100J

Productinformatie

Artikelnummer	ANA60
Merk	ERSA
Is on Sale	Nee
